

The most extreme values are astrophysical subpopulations—not generic data errors

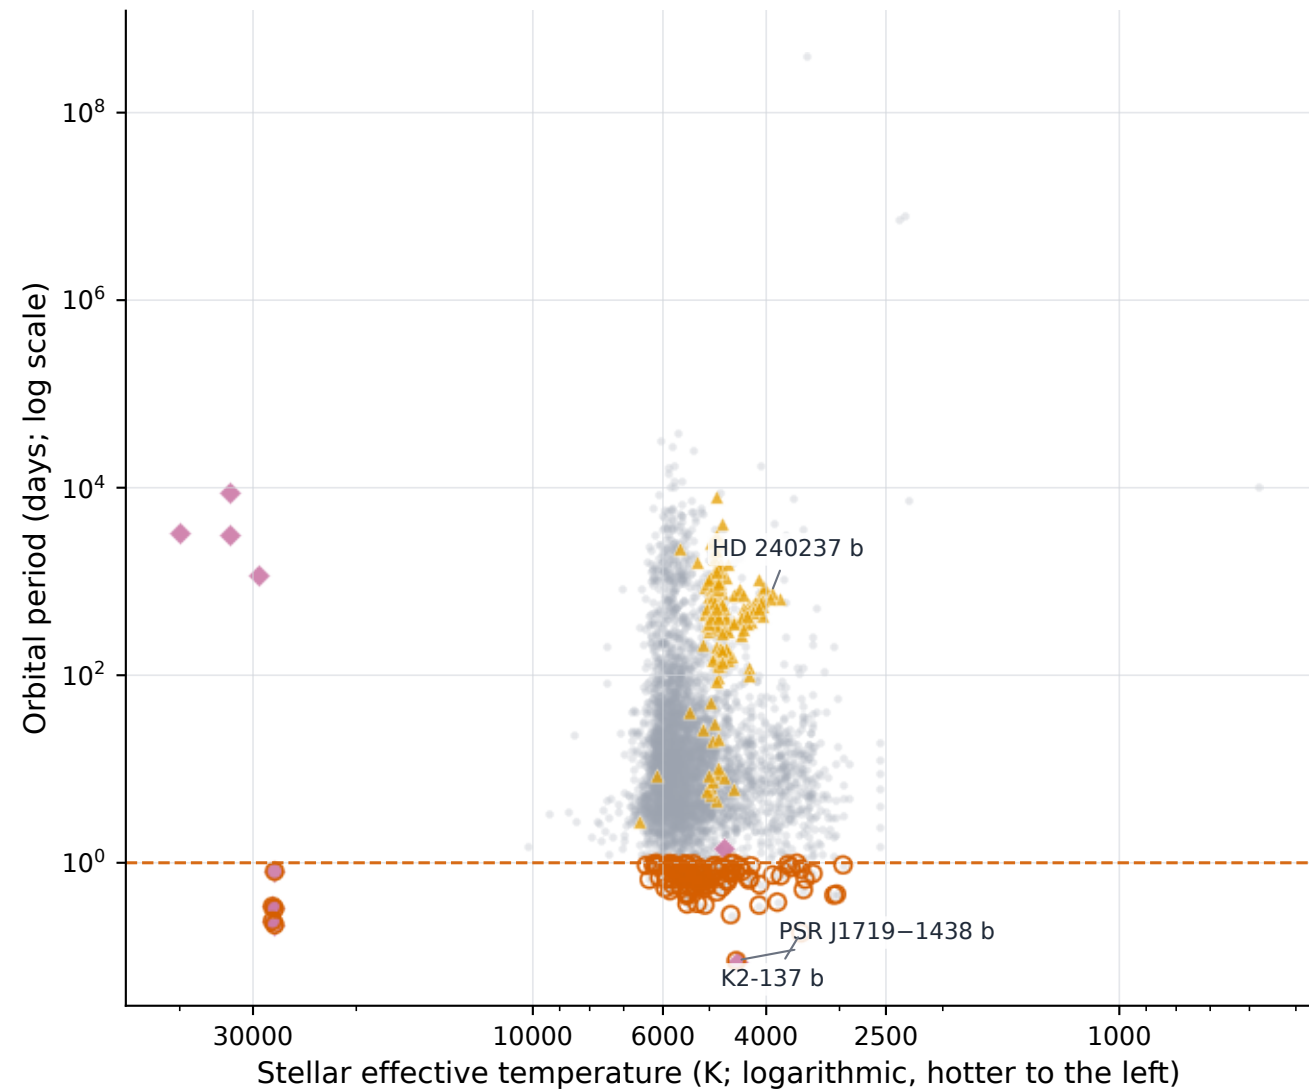

Screening flags are used for annotation and sensitivity analysis. They are not automatic deletion rules.

● Ordinary dwarf / unflagged ▲ Giant / evolved host (192) ◆ Compact remnant / hot subdwarf (18) ○ Ultra-short period <1 day (114)

A. Host-star regimes

B. Orbital-period extremes

Giant/evolved: radius $\geq 3 R_{\odot}$ or $\log g < 3.5$. Compact/hot-subdwarf: compact-object name or high-gravity/hot-small-star criteria. The fixed-flux HZ label does not assess long-term habitability around evolved or compact hosts.
