

Stellar structure adds joint predictive information; a method indicator does not

● Chunk 4: period-temperature ■ + stellar radius and mass ◆ + regularized discovery method

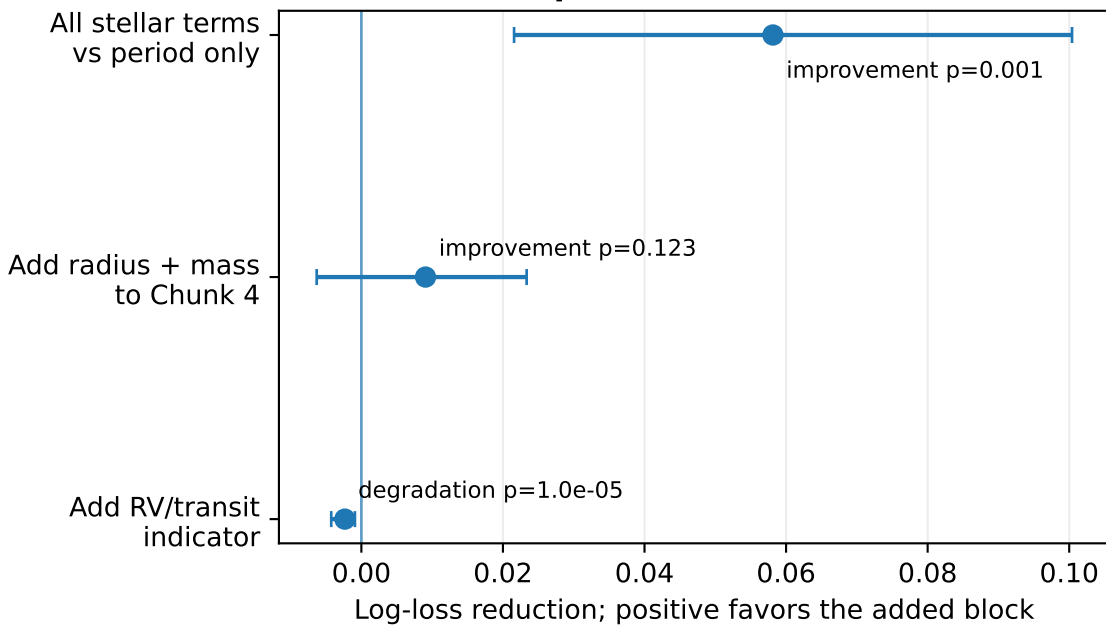

A. Controlled additions within one ridge-logistic family

B. Incremental ranking value

C. Incremental probabilistic value

15 × 6 host-grouped outer validation. Every new model uses the exact training-only Chunk 4 threshold for its outer fold, so thresholded metrics share a frozen operating point. Uncertainty resamples complete host systems.
